### ABSTRACT

**Introduction:** Mentally ill patients are one of the most vulnerable groups in society. Human Rights Commissions found appalling and unacceptable conditions when they visited several psychiatric hospitals in Central America and India during the last five years. Incidence of violation of rights of mentally ill patients can be avoided if the nurse becomes aware of them.

**Research methodology:** A descriptive survey approach. Non-experimental research design setting of the study was Krishna Institute of Nursing Sciences, Karad. In this study, sample consists of 33 Post Basic B. Sc. Nursing students in Krishna Institute of Nursing Sciences, Karad. Non probability convenient sampling technique. Inclusion criteria: Post Basic B. Sc Nursing students of 1<sup>st</sup> year who are willing to participate. Data collection techniques structured knowledge questionnaire to assess the knowledge regarding human rights of mentally ill. The objectives of the study were: To assess the level of knowledge regarding human rights of mentally ill among Post Basic B. Sc Nursing students. & To determine the association between certain demographic variables and knowledge of Post Basic B.Sc. Nursing students regarding human rights of mentally ill.

**Results:** In the present study, it was found that 85% of the nursing students had average knowledge and 15% had poor knowledge regarding human rights of mentally ill. In the present study, there is no significant association between demographic variables and knowledge score of Post Basic B. Sc. nursing students.

**Conclusion:** The findings of the study reveal that the level of knowledge of Post Basic B.Sc Nursing Students is average.

**Key words:** Knowledge, Human rights, Mentally ill, Nursing
